

Use

Case Full Description:

Use Case Name:	Register for Session	
Scenario:	A member wants to register for an upcoming HR training or event through the HR GameChanger system.	
Triggering Event:	The member clicks the Register for Session option.	
Brief Description:	The system allows members to browse available sessions, choose one, and complete the registration process. If a payment is required, the system redirects the member to the payment gateway.	
Actors:	Member	
Related Use Cases:	• Pay Registration Fee (Secure Payment Handshake) • Manage Profile	
Stakeholders:	Member and HR Admin	
Preconditions:	• Member is logged in. • Member has a complete profile. • Session is available.	
Postconditions:	• Member is registered for the session. • Registration is saved in the system.	
Flow of Activities:	Actor	System

	1. Open the session page. 2. Select the Session. 3. Click the Registrar. 4. Confirm the registration.	1. Display the available sessions. 2. Show the details of the session. 3. Check if the session is available. 4. Saves the registration. 5. Shows the registration Confirmation.
Exception Conditions:	• Session is full. • Member is already registered. • System error. • Internet connection disconnected.	

2

Use Case Name:	Secure Payment Handshake
Scenario:	A member completes the payment required for session registration.
Triggering Event:	The member proceeds to payment after registering for a session.
Brief Description:	The system securely communicates with the external payment gateway to process the registration fee. Once the payment is verified, the system confirms the registration.
Actors:	Member, payment gateway
Related Use Cases:	• Register per Session
Stakeholders:	Member, HR Administrator, Payment Gateway
Preconditions:	• The member has selected a paid training session. • The payment gateway is available.

Postconditions:	• Payment is recorded successfully. • Registration is confirmed.	
Flow of Activities:	Actor	System
	1. Selects a payment method. 2. Enters Payment Details. 3. Confirms the payment.	1. Connects to the payment gateway. 2. Processes the payment securely. 3. Receives the payment result. 4. Updates the registration status and displays a confirmation.
Exception Conditions:	• Payment is declined. • Payment gateway is unavailable. • Network connection is interrupted.	

3

Use Case Name:	View Analytics Dashboard
Scenario:	A user wants to monitor training participation and performance statistics.
Triggering Event:	The member clicks the Register for Session option.
Brief Description:	The system presents graphs, charts, attendance summaries, and other analytics that help users monitor training activities and performance.
Actors:	Member, HR Admin

Related Use Cases:	• Generate Report	
Stakeholders:	Member and HR Admin	
Preconditions:	• The user is logged in. • Analytics data is available.	
Postconditions:	• The requested analytics are displayed.	
Flow of Activities:	Actor	System
	• Opens the Analytics Dashboard. • Selects the preferred report or data to view. • Reviews the displayed charts, graphs, and statistics.	• Verifies the user's access rights. • Retrieves the requested analytics data from the database. • Displays the dashboard with updated information.
Exception Conditions:	• The user does not have permission to access the dashboard. • No analytics data is available. • The system fails to retrieve the requested information.	

Use Case Name:	Manage Members Profile
Scenario:	A member or HR Administrator updates profile information.
Triggering Event:	The user selects Manage Members Profile.

Brief Description:	The system allows users to update personal information such as contact details, department, profile picture, and other account information.	
Actors:	Member	
Related Use Cases:	None	
Stakeholders:	Member and HR Admin	
Preconditions:	The user is logged in.	
Postconditions:	Updated profile information is saved.	
Flow of Activities:	Actor	System
	- Opens the Manage Profile page. - Updates personal information such as name, email, or contact details. - Clicks the Save button	- Displays the current profile information. - Validates the entered information. - Saves the updated profile to the database. - Confirms that the profile has been successfully updated
Exception Conditions:	- Required fields are left blank. - Invalid information is entered. - The system is unable to save the updated profile due to a database error	

Use Case Name:	Generate Report	
Scenario:	HR Administrator generates reports about members and training sessions.	
Triggering Event:	The HR Administrator generates reports about members and training sessions.	
Brief Description:	The system compiles attendance records, registrations, and other training data into a report that can be viewed or exported.	
Actors:	HR Admin	
Related Use Cases:	• Pay Registration Fee (Secure Payment Handshake) • Manage Profile	
Stakeholders:	HR Administrator and Management	
Preconditions:	• The administrator is logged in. • Report data exists.	
Postconditions:	• The requested report is generated successfully.	
Flow of Activities:	Actor	System
	• Opens the Validate Session Attendance page. • Selects the training session. • Marks or verifies the attendance of members. • Clicks the Save button.	• Displays the list of registered members. • Records the attendance status. • Saves the attendance records to the database. • Confirms that the attendance has been successfully recorded.

Exception Conditions:	• No members are registered for the selected session. • Attendance has already been recorded. • The system is unable to save the attendance due to a database error
------------------------------	---

6

Use Case Name:	Validate Session Attendance	
Scenario:	The HR Administrator verifies the attendance of members who participated in a training session.	
Triggering Event:	The administrator opens the attendance validation feature.	
Brief Description:	The system allows the HR Administrator to review attendance records and validate whether registered members attended the training session.	
Actors:	HR Administrator	
Related Use Cases:	• Generate Report	
Stakeholders:	HR Administrator and Member	
Preconditions:	• The training session has already taken place. • Registered participants exist.	
Postconditions:	• Attendance records are updated and validated.	
Flow of Activities:	Actor	System

	• Opens the Generate Report page. • Selects the report type and date range. • Clicks the Generate Report button. • Downloads or prints the generated report.	• Displays the available report options. • Retrieves the required data. • Generates the report. • Displays the completed report for download or printing.
Exception Conditions:	• No data is available for the selected report. • Invalid report filters are selected. • The system is unable to generate the report due to a processing error.	

7

Use Case Name:	Interact/Manage AI Chatbot
Scenario:	The HR Administrator interacts with and manages the AI chatbot to assist users with HR-related inquiries.
Triggering Event:	The administrator opens the AI Chatbot feature.
Brief Description:	The system enables the HR Administrator to monitor chatbot conversations, update chatbot responses, and manage chatbot settings. The chatbot also assists users by answering common HR and training-related questions.
Actors:	HR Administrator, AI Chatbot
Related Use Cases:	None
Stakeholders:	HR Administrator, Member
Preconditions:	• The administrator is logged in. • The AI chatbot service is available.

Postconditions:	• Chatbot interactions are completed or chatbot settings are updated.	
Flow of Activities:	Actor	System
	• Opens the AI Chatbot page. • Enters a question or updates the chatbot settings. • Clicks the Send or Save button.	• Displays the chatbot interface. • Processes the request or updated settings. • Displays the chatbot response. • Confirms that the chatbot settings have been successfully updated.
Exception Conditions:	• The chatbot service is unavailable. • Invalid input is entered. • The system is unable to process the request due to a connection error.
